| Yes / No | Has your pet seen a veterinarian? Name of veterinarian: |
| Yes / No | Does your pet have any known medical problems? If "Yes", please describe: |

Authorization for Surgery:

I, the undersigned, acting as the owner/guardian of the above pet(s) have read and understood this entire page and authorize the Animal Welfare Association ("AWA") to anesthetize, surgically sterilize (spay or castration) and provide other related medical care to my animal(s). I understand that there are inherent risks associated with anesthesia and surgery including but not limited to infection, post-operative bleeding, anesthetic drug reactions, anesthetic heart complications, allergic reactions and death. I understand that my pet(s) will not be examined by a veterinarian prior to surgery and that the AWA will not perform any preoperative blood or diagnostic tests and the AWA does not use external anesthetic monitoring, e.g. EKG, during surgery. I understand that my pet(s) should be examined and evaluated as a surgical candidate by his or her regular veterinarian prior to surgery to decrease the risks associated with anesthesia and surgery.

I will hold harmless the AWA, its veterinarians, technicians, officers, directors, volunteers and agents for any problems experienced by my animal as a result of anesthesia and surgery. I further agree to hold harmless the animal shelter, animal welfare group or humane society that may have scheduled the surgery.

If during the course of surgery a condition is discovered or occurs that requires immediate treatment, the attending veterinarian may, in his/her absolute discretion, proceed with any and all procedures necessary. I consent to these procedures and agree to pay for these procedures. I agree that I will be financially responsible for any post-operative medical treatment relating to surgery or any other unrelated medical problems of my pet(s).

I have been informed that the AWA is not a 24 hour facility and if my pet(s) needs to stay overnight there will not be a veterinarian or a technician in the building. I am aware that the AWA's veterinarians are not always present in the building during normal business hours. I am aware that if my pet(s) needs emergency or additional veterinary treatment related to a post-operative surgical complication I may have to seek the services of a veterinary emergency hospital at my own financial expense.

METACAM (PAIN MANAGEMENT) RELEASE

The pain medication Animal Welfare Association (AWA) Spay/Neuter Clinic is now using for all animals is Metacam. Metacam is not used if your animal has been diagnosed with a liver, kidney or bleeding condition or is on ANY type of medication including, but not limited to, aspirin, Rimadyl, prednisone, kidney medications, liver medications, heart medications, injectable (excluding vaccines), topical medications (spray or ointment).

If your pet has been on any medications within the last three (3) weeks, please let us know. Metacam can have adverse reactions with some of these medications.

Some of the most common side effects may be diarrhea and vomiting. If there are any of these side effects, stop the Metacam immediately.

I have read and understand the above.
